operation

Awning windows are unique as they swing outwards from the bottom of the window, hinged at the top. In addition, awning windows can also be stationary and not open at all.

transom windows

Transom windows, a fixed window that is mounted on top of another window, allow additional light into a home. Windows can have single units over each window, or one large transom to cover multiple windows. Oftentimes, when paired with awning windows, these units are made larger than the standard heights.
